

The Division of Critical Care,
Medanta Institute of Critical Care and Anaesthesiology welcomes you to

Medanta ICU Summit

ICU Radiology Chapter - Images Decoded!

30 June 2018 - 01 July 2018
2nd Floor Auditorium, Medanta - The Medicity, Gurugram

SCIENTIFIC PROGRAMME

Invitation

From the Desk of the Chairperson.....

The increasing complexity of the critical care patient has generated a new dependence on imaging. Radiological investigations now form an integral part of the everyday management of the ICU patient. It is essential that we understand it to a reasonable extent.

This CME will enable us to develop rapid, accurate diagnosis despite the many difficulties associated with bedside examination including time constants and low specificity of bedside radiographs. Discussed by an interdisciplinary team of experts in radiology and critical care medicine, this CME would give a concise overview of how to use the latest diagnostic imaging technology in ICU.

Each lecture would give a brief description of normal and morphologic findings, imaging strategies, differential diagnosis and potential complications. It would have a follow up interactive session where delegates would review the quizzes and PACS cases with X-ray, USG, ECHO, CT and MRI to consolidate fundamental principles of imaging interpretation.

It would benefit tremendously those who are looking for a deeper understanding to assist in clinical judgement.

I welcome you all to savour the radiological independence in critical care world.

Warm regards
